RE: **Quarterly Summary and Monitoring Report – First Quarter 2006**
SECOR Project No.: 77CP.60009.02.0220

Dear Ms. Stone:

On behalf of ConocoPhillips, SECOR International Incorporated (SECOR) is forwarding the quarterly summary report for the following location:

Service Station	**Location**
Former Bulk Plant No. 0220	720 North Franklin Street Fort Bragg, California

Sincerely,
SECOR International Incorporated

Thomas M. Potter
Project Scientist

Attachments: SECOR's *Quarterly Summary Report – First Quarter 2006*

cc: Mr. Thomas Kosel, ConocoPhillips

QUARTERLY SUMMARY REPORT
First Quarter 2006

Former Bulk Plant No. 0220
720 North Franklin Street
Fort Bragg, California

City/County ID #: Fort Bragg

County: Mendocino

SITE DESCRIPTION

The site is located near the north end of the city of Fort Bragg at the corner of Franklin Street and Spruce Street. Pudding Creek is located approximately 1,200 feet north of the site, and the Pacific Ocean is located approximately 2,400 feet west of the site. The facility was built in 1924 and currently consists of a storehouse, an office, a drum storage and filling area, five above ground storage tanks (ASTs), a pump area, and loading racks. Former components of the facility included two 550-gallon underground spill contaminant tanks (SCTs) used to collect overflow spillage and overflow spillage with waste oil respectively, and a pump area. Product was historically supplied to the bulk plant by rail and for the past 30 years by truck. There are two separate unloading racks; one was to service rail cars (currently not in use) and the other to service trucks. Both the train and truck unloading racks serviced the bulk storage ASTs and loading rack via underground pipelines. The tank farm has a capacity of 85,000 gallons of storage with four 20,000-gallon ASTs and one 5,000-gallon AST.

PREVIOUS INVESTIGATIONS AND REMEDIAL ACTIVITIES

In September 1988, Kaprealian Engineering Incorporated (KEI) conducted a preliminary site investigation that included the installation of six borings for soil and groundwater sampling (EB-1 through EB-6). The borings were advanced to a total depth ranging from 17 to 19 feet below ground surface (bgs). Total petroleum hydrocarbons with gasoline distinction (TPHg) and total petroleum hydrocarbons with diesel distinction (TPHd) were detected in soil and groundwater at concentrations ranging from 80 milligrams per kilogram (mg/kg) to 340 mg/kg, respectively.

On January 23, 1989, KEI oversaw the installation of four monitoring wells (MW-1 through MW-4) at the site. The wells were installed at depths ranging from 20 to 25.5 feet bgs. Groundwater was encountered at depths ranging from 10.5 to 14 feet bgs. All soil samples taken from the monitoring wells recorded non detectable concentrations of TPHg, TPHd, benzene, toluene, ethyl-benzene and total xylenes (collectively BTEX) except the ten foot sample from MW-4 which recorded a concentration of 790 mg/kg of TPHg. Groundwater samples taken from the wells contained concentrations of benzene ranging from 4.1 to 87 micrograms per liter (µg/L), concentrations of TPHg ranging from 2800 to 8800 µg/L, and concentrations of TPHd ranging from 1900 to 160,000 µg/L.

On March 29, 1989, KEI oversaw the installation of five additional monitoring wells (MW-5 through MW-9) at the site. The wells were installed at depths ranging from 18 to 20 feet bgs. Groundwater was encountered at depths ranging from 9 to 15.5 feet bgs. Soil samples from the borings were analyzed for TPHg, TPHd, and BTEX. TPHg was found in the 10-foot sample from MW-5 at a concentration of 1.1 mg/kg. TPHd was detected in soil from MW-6 at a concentration of 400 mg/kg.

On July 26, 1989, KEI oversaw the installation of two additional monitoring wells (MW-10 and MW-11) at the site. The wells were installed at depths ranging from 19 to 20 feet bgs. Soil samples from the borings were analyzed for TPHg, TPHd, and BTEX. TPHg and TPHd were found in the 13-foot sample from MW-11 at concentrations of 31 mg/kg and 120 mg/kg, respectively. Groundwater samples taken from the MW-10 and MW-11 contained TPHd at concentrations of 180 µg/L and 540 µg/L, respectively.

On September 1, 1995, KEI oversaw the installation of one additional groundwater monitoring well (MW-12) at the site. The well was installed at a depth of 19 feet bgs. Soil samples from the borings were analyzed for TPHg, TPHd, and BTEX. All soils recorded non-detectable concentrations of all analytes. Groundwater samples taken from the well contained TPHg, TPHd, benzene, toluene, and ethylbenzene at concentrations of 430 µg/L, 220 µg/L, 7.2 µg/L, 51 µg/L, and 12 µg/L, respectively.

In December 1996, KEI oversaw the removal of two 550 gallon spill containment tanks. During the excavation, KEI conducted a limited excavation around the vicinity of the tanks. In February 1997, Pacific Environmental Group (PEG) conducted a Phase I site assessment of the site. To follow up with this assessment, on September 25, 1997, PEG oversaw the advancement of five soil borings (SB-1 through SB-4 and HB-1). The borings were advanced to depths ranging from 17.7 to 35 feet bgs. Soil samples analyzed from HB-1, SB-1, and SB-4 contained relatively low concentrations of TPHg and TPHd. The highest concentration of TPHg (37 mg/kg) and TPHd (28 mg/kg) were seen in the five-foot sample taken from SB-1.

In February 1998, the quarterly monitoring activities at the site were taken over by Gettler-Ryan (GRI).

In September 1998, SHN Consulting Engineers & Geologists Inc. (SHN) prepared an interim corrective action plan (ICAP) for the site. In the ICAP, SHN recommended the installation of a supplemental oxygen source to enhance bioremediation processes at the site.

On April 12, 1999, SHN performed an additional subsurface investigation at the site. During the investigation, ten soil borings (SB-101 through SB-110) were advanced and abandoned, aquifer slug tests were performed on existing groundwater monitoring wells, and petroleum hydrocarbon fingerprinting was performed on the groundwater from the site. Based on the results of these three tests, SHN recommended the installation of a biosparge system.

During May and June of 2000, SHN supervised the installation of one bioventing test well, two biosparge wells, and three bioventing observations wells. A bioventing pilot test and a biosparge pilot test were conducted to determine the effectiveness of each method for site

remediation. Based on the results of the pilot tests, the anticipated radius of influence for a bioventing system is 30 feet per well.

On December 5, 2002, SHN recommended the installation of 7 additional bioventing wells and 20 additional ozone sparge points at the site.

On October 8 and 9, 2003, SHN oversaw the installation of biovent wells (BV-2 through BV-8).

On October 7 through 10, 2004, SHN oversaw the installation of 20 ozone sparge wells (SP-1 through SP-20). Soil samples were analyzed from all the borings. The highest concentrations of hydrocarbons were found in soils taken from SP-7 and SP-18.

FIRST QUARTER 2006 SUMMARY

Quarterly groundwater monitoring and sampling was conducted by TRC on February 2, 2006 in accordance with RWQCB-NCR MRP No. R1-2003-0107 (Attachment 1). The current groundwater monitoring network consists of six onsite wells (MW-1 through MW-4, MW-6 and MW-7) and six offsite wells (MW-5 and MW-8 through MW-12) located in Spruce Street and Franklin Street. Soil borings and well construction details are presented in Table 1. Wells MW-2, MW-3, MW-5, MW-10 and MW-12 are sampled semi-annually (first and third quarters). Wells MW-6, MW-7, and MW-9 are sampled annually, and wells MW-1, MW-4, MW-8, and MW-11 are sampled quarterly. All wells will be monitored for depth to groundwater quarterly. The monitoring and sampling plan is summarized in Table 2.

During the first quarter 2006, depth to groundwater was gauged in each monitoring well. In accordance with the Monitoring Reporting Program (MRP), groundwater samples from each monitoring well are monitored quarterly for dissolved oxygen, dissolved carbon dioxide, oxidation-reduction potential, pH, temperature and conductivity. The samples were also analyzed for TPHg total purgeable petroleum hydrocarbons (TPPH), BTEX, and methyl tertiary butyl ether (MtBE). Additionally, the headspace in each monitoring well was monitored quarterly for percent oxygen, percent carbon dioxide, and percent organic vapor.

Historical groundwater elevation and analytical data through the first quarter 2006, TRC's monitoring and sampling procedures, certified laboratory analytical report, chain-of-custody documentation, field data sheets, and waste water disposal procedures are presented in TRC's *Quarterly Monitoring Report January Through March 2006*, dated March 15, 2006, included in Attachment 2. A summary of the first quarter 2006 groundwater monitoring and sampling results is presented below.

FIRST QUARTER 2006 MONITORING AND SAMPLING RESULTS

Groundwater Monitoring and Gradient Data

Depth to groundwater in the twelve site wells ranged from approximately 7.36 feet (MW-10) to 9.92 feet bgs (MW-4). Groundwater levels reported during the first quarter 2006 were consistent with historical levels, which have ranged between 5.08 feet and 24.87 feet bgs. Groundwater elevations in the site wells during the first quarter 2006 ranged from approximately 67.54 feet (MW-10) above mean sea level (msl) to 74.86 feet above msl

(MW-5). Regional groundwater flow during the first quarter 2006 was northwesterly at a hydraulic gradient of 0.03 feet per foot, which is consistent with the groundwater flow direction and hydraulic gradient data reported over previous quarters (Table 3). A regional groundwater elevation contour map was prepared by TRC using monitoring data collected on February 2, 2006 and is presented in Attachment 2.

Groundwater Quality Data

Groundwater samples were collected from wells MW-1 through MW-12 on February 2, 2006. Groundwater analytical results and TPHd and TPPH isoconcentration maps are included in TRC's *Quarterly Monitoring Report January Through March 2006*, dated March 15, 2006 (Attachment 2).

The dissolved plume within the shallow zone continues to be centered around the former ASTs located on the north edge of the property. The heart of the plume is centered at MW-8 and MW-4. Concentrations of TPHg, TPHd, BTEX, and MtBE this quarter were generally consistent with historical levels.

The highest concentrations of petroleum hydrocarbons were detected in well MW-4 during the first quarter 2006. During the first quarter 2006, the groundwater sample collected from MW-4 had site maximum concentrations of TPPH (540 ug/L) and TPHd (18,000 ug/L). The concentrations of TPPH and TPHd were generally consistent with historical values. MtBE and BTEX were not detected in any wells sampled during this period. These results are consistent with recent stable trends. Sample parameters are presented in Table 4.

Remediation Compliance Sampling

During the first quarter 2006, SHN sampled MW-1, MW-4, and MW-8 on January 30, 2006, February 16, 2006, and March 8, 2006. MW-1 had concentrations of diesel at 340 µg/L (1/30/06) and 63 µg/L (3/8/06), and gasoline range organics (GRO) at concentrations of less than 50 mg/L for the entire quarter. MW-4 had concentrations of diesel at 930 µg/L (1/30/06), 1,100 µg/L (3/8/06), and GRO at a concentration of 370 µg/L (1/30/06), 660 µg/L (2/16/06), and 790 µg/L (3/8/06). MW-8 had concentrations of diesel at 1,800 µg/L (1/30/06), 1,900 µg/L (3/8/06), and GRO at a concentration of 180 µg/L (2/16/06), 160 µg/L (3/8/06). The field notes, certified laboratory analytical report and chain-of-custody documentation are included as Attachment 3.

Plume Status

In the most recent samples collected from each well, petroleum hydrocarbons in shallow groundwater were detected at MW-1, MW-4, MW-8, MW-10, MW-11 and MW-12. The extent of dissolved petroleum hydrocarbons in shallow groundwater is defined downgradient (northwest), except for TPHd at MW-10, and cross-gradient (southwest-northeast) of the site at MW-6 and MW-5. The extent of dissolved petroleum hydrocarbons in shallow groundwater has been defined upgradient of well MW-4 by no detected concentrations of petroleum hydrocarbons in MW-5.

MtBE has been detected in both on-site and off-site wells. Generally, detection is sporadic,

at low concentrations, and limited to on-site wells MW-1 and MW-2 and offsite wells MW-8 through MW-12. Most recently, the highest recorded concentration of MtBE in these wells was 43 µg/L reported in November 2004 at MW-10. Since that time, MtBE concentrations in all wells has declined.

BTEX have also been detected in both on-site and off-site wells. Generally, detection is sporadic and concentrations are low. BTEX were not detected in the most recent sample collected from each well.

STATUS OF REMEDIAL ACTION

The system experienced electrical damage on August 9, 2005, and remained non operational through the first quarter 2006. SECOR is evaluating options to repair or replace this remediation system. Remedial system field data sheets for the Ozone System are included in Attachment 3. Operational data for the Ozone System are summarized in Table 5. Ozone injection - groundwater monitoring data is summarized in Table 6. Concentration vs. Time Graphs for the Ozone Injection Monitoring Wells can be found in Attachment 4.

WASTE DISPOSAL

The volume of purged groundwater generated and disposed during the quarterly groundwater monitoring event is documented in TRC's Quarterly *Monitoring Report, January Through March 2006* dated March 15, 2006 (Attachment 2).

RECENT SUBMITTALS/CORRESPONDENCE

SECOR's: *Quarterly Summary Report – Fourth Quarter 2005* dated January 24, 2006.

SECOR's: 2005 Annual Summary and Monitoring Report dated March 9, 2006.

WORK COMPLETED IN FIRST QUARTER 2006

1. TRC performed quarterly groundwater monitoring and sampling at the site.
2. SECOR prepared and submitted fourth quarter 2005 quarterly summary and monitoring report.
3. SECOR performed operations and maintenance of the ozone and biovent systems.

PROPOSED ACTIVITIES FOR SECOND QUARTER 2006

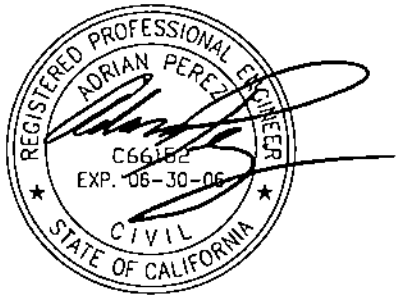
1. TRC to conduct groundwater monitoring and sampling.
2. SECOR to prepare and submit quarterly summary report.
3. SECOR to perform operations and maintenance on the ozone and biovent systems.
4. SECOR to evaluate options of repair or replacement of ozone system.

LIMITATIONS

This report presents our understanding of existing conditions at the subject site. The conclusions contained herein are based on the analytical results, and professional judgment in accordance with current standards of professional practice; no other warranty is expressed or implied. SECOR assumes no responsibility for exploratory borings or data reported by other consultants or contractors.

Sincerely,
SECOR International Incorporated

Adrian Pérez, P.E.
Associate Engineer



Ben McKenna
Project Geologist

Site Safety Concerns

#0220 Ozone Injection Monitoring

1) After arriving on-site, review work order, HASP, and JSA within HASP on Ozone Gas Hazards.

2) Prior to conducting field work, insert ozone sensitive paper into badge and attach to shirt or coat.
Make sure ozone meter has been warmed up. Warm up times can be greater than 1 hour.
Refer to second page of work order and fill out requested information.

3) Monitor and document ozone readings outside of ozone compound and ozone panel.
Since ozone is heavier than air, be sure to monitor for ozone at low points in compound and panel.
If positive ozone readings are encountered, call project manager (916) 861-0400 x288 to discuss possible solutions.

4) If no positive ozone readings are found, inspect fittings and tubing connection for signs of wear or damage.
Use a tedlar bag to collect vapor sample from sample port on double containment piping for ozone injection line.
Due to meter sensitivity, push vapor out of tedlar bag and carefully check for ozone in vapor sample.
DO NOT check ozone concentration directly from tedlar bag, high ozone concentrations can damage meter.

5) Using meter, Monitor for Ozone, O^3, along the piping runs, at top of each injection well lid, and within each well box.
Set-up traffic delineators to define work area around each injection well prior to collecting ozone readings.
If positive ozone readings are encountered, call project manager to discuss possible solutions.

6) Sample Monitoring Wells . Analyze for TPHg, BTEX, and MtBE by EPA method 8260.

7) Before leaving the site check your Ozone badge and note badge color on second page of work order.

8) Call into the Sacramento office (916) 861-0400 before you leave the site.

9) **Forward field notes and equipment rental forms to Chris Bovia in Sacramento.**

EQUIPMENT NEEDED

Site Safety Plan
O3 Meter and Ozone Badge
1/2", 9/16', and 15/16" sockets, pliers, and other misc. tools
Traffic Delineators
Nitrile gloves, COC's, drum labels, etc.

JOURNEY HAZARD ASSESSMENT CARD

STOP! THINK! GO!

Name Brian Schoenroeman Date 1/30/06

STOP

Do I need to make this journey? ☑ Yes ☐ No

STOP

Where am I traveling? How long will I be driving? And do I have an ETA with a contact person and have communicated area hazards and safest mode of transport?

THINK

How can I ensure that I have a safe journey?

THINK

Am I well rested an alert for the journey? ☑ Yes ☐ No

THINK

Have I done a vehicle walk around and ensured that the vehicle is safe and ready for travel? ☑ Yes ☐ No

ELEMENTS OF THE DRIVING STANDARD

- Has vehicle been inspected? ☑ Yes ☐ No
- Will passengers be transported? ☐ Yes ☑ No
- Has cargo been secured? ☑ Yes ☐ No
- Driver's License is current? ☑ Yes ☐ No
- Appropriately rested and alert? ☑ Yes ☐ No
- Journey risks have been identified? ☑ Yes ☐ No
- Seatbelts are in working order? ☑ Yes ☐ No
- Medically fit for driving? ☑ Yes ☐ No

HAVE A SAFE TRIP!

DRIVING IS RISKY BUSINESS!

Daily Vehicle Checklist

Employee Name: Brian Schoonover **Region/Business Unit:** 07

Date: 1/30/06 **Time:** 0500 **Job:** CP-0220 CP 0228 Forartransit

Job #: 770T41658000009 77CP60928000001 77CP6092700000007 **Vehicle Make/Model:** Ford F350

Vehicle Color: white **Vehicle License Plate Number:** 6Y56342

Vehicle Mileage End: 103112 103512 103377

Vehicle Mileage Start: 103042 103112 103312

Total Miles Driven: ~~103112~~ 70 200 65

Perimeter Walk Around:	Item is OK	Item is NOT OK
Check for signs of vandalism, negligence, damage or unusual conditions	✓	
Check all tires for excessive and unusual wear and proper inflation – include the spare tire if it is easily accessible	✓	
Check under vehicle for signs of leaking fluids	✓	
Check wiper blades (Do they work? Do they need replacement?)	✓	
Check all light systems – brake, head, back-up, running, turn signals, emergency flashers	✓	
Check to make sure doors, truck/toolbox lids, tailgates all open and close properly (Make sure you have keys to any toolboxes that you may need to access)	✓	

Check Gauges on Dashboard:	Item is OK	Item is NOT OK
Fuel Level	✓	
Oil light	✓	
Engine Coolant Temperature Gauge	✓	
Service Indicator Lights	✓	
Battery Charge Indicator	✓	

Inside Vehicle:	Item is OK	Item is NOT OK
Make sure seatbelts are present for all who will be riding in the vehicle	✓	
Secure all cargo in the vehicle so that items will not become projectiles in the event of sudden stops or collisions	✓	
Adjust the seat position, rearview and side mirrors	✓	
Adjust temperature controls, vents, radio, etc.	✓	

Notify the vehicle manager or rental company if you feel that any deficiencies are unsafe and DO NOT drive the vehicle!

Signature: Brian Schoonover

#0220 Ozone Injection Monitoring

1) After arriving on-site, review work order, HASP, and JSA within HASP on Ozone Gas Hazards.

2) Prior to conducting field work, insert ozone sensitive paper into badge and attach to shirt or coat.
Make sure ozone meter has been warmed up. Warm up times can be greater than 1 hour.
Refer to second page of work order and fill out requested Information.

3) Monitor and document ozone readings outside of ozone compound and ozone panel.
Since ozone is heavier than air, be sure to monitor for ozone at low points in compound and panel.
If positive ozone readings are encountered, call project manager (916) 861-0400 x288 to discuss possible solutions.

4) If no positive ozone readings are found, inspect fittings and tubing connection for signs of wear or damage.
Use a tedlar bag to collect vapor sample from sample port on double containment piping for ozone injection line.
Due to meter sensitivity, push vapor out of tedlar bag and carefully check for ozone in vapor sample.
DO NOT check ozone concentration directly from tedlar bag, high ozone concentrations can damage meter.

5) Using meter, Monitor for Ozone, O^3, along the piping runs, at top of each injection well lid, and within each well box.
Set-up traffic delineators to define work area around each injection well prior to collecting ozone readings.
If positive ozone readings are encountered, call project manager to discuss possible solutions.

6) Sample Monitoring Wells . Analyze for TPHg, BTEX, and MtBE by EPA method 8260.

7) Before leaving the site check your Ozone badge and note badge color on second page of work order.

8) Call into the Sacramento office (916) 861-0400 before you leave the site.

9) **Forward field notes and equipment rental forms to Chris Bovia in Sacramento.**

EQUIPMENT NEEDED:

Site Safety Plan
O3 Meter and Ozone Badge
1/2", 9/16', and 15/16" sockets, pliers, and other misc. tools
Traffic Delineators
Nitrile gloves, COC's, drum labels, etc.

Question	T/F/NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	NA	
The cooler's custody seal, if present, is intact.	NA	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

Client: Secor International, Inc. Job Number: 720-2211-1

LogIn Number: 2211

Question	T/F/NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	NA	
The cooler's custody seal, if present, is intact.	NA	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

LOGIN SAMPLE RECEIPT CHECK LIST

Client: Secor International, Inc. Job Number: 720-2512-1

LogIn Number: 2512

Question	T/F/NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	NA	
The cooler's custody seal, if present, is intact.	NA	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True
